SYDNEY, NSW 2000

Dear Sir/Ms,

**RE: DRILLING STATUS, RAUN #1, BONDI PROSPECT,
ONSHORE GULF COAST, SOUTH TEXAS, USA**

The Operator, Texon Petroleum Ltd ("Texon") has advised the status of Raun #1 on the Bondi Prospect.

Raun #1 at the time of the daily well report received this morning in Perth was at 5,065 feet (1,544 metres) depth. Current activity was conditioning mud prior to recommencing drilling to 9 5/8" casing point at 6,500 feet (1,981 metres) depth.

Until target objectives are intersected in approximately 40 days from spud of 8 November further advice on progress of the well will be given on a weekly basis.

Background

The Bondi prospect is a large 3 way closure with a 4 way dip component to the trap containing stacked Upper Wilcox sands objectives with associated DHIs that conform to structural closure and tie directly to Upper Wilcox sands in the adjacent productive Cottonmouth Field, 2.2 miles to the northwest. Wells in the Cottonmouth Field had initial production rates of 7 to 12 million cubic feet of gas per day with up to 200 barrels of oil as condensate. The prospect targets 30 to 76 bcfge in the multiple Upper Wilcox objectives within closure which are expected between 11,000 feet and total well depth of 13,500 feet.

Participants with interests in the drilling of the Bondi Prospect are;
